Subject:	CodeCoverage: should data/temporary be ignored?		

#### Description

Currently the testing web controller has a flag to enable code coverage.

However the code coverage is correctly limited to the package we are testing (working as intended). But: The code coverage seems to consume the data/temporary folder too. The manual says that unit testing should be done by calling constructors directly and not using any approxies but using mock objects and injecting them into the tested classes. That's rather fine.

Due to a bug within phpunit itself currently the code coverage feature will report notices as soon as it sees the data/temporary package. PHPUnit was fixed.

See http://lists.typo3.org/pipermail/flow3-general/2010-October/000603.html

See PHPUnit issue at http://github.com/sebastianbergmann/phpunit/issues/closed#issue/54

I suggest updating Flow3's PHPUnit package. And maybe the data directory should be blacklisted so that PHPUnit does not try code coverage on the temporary data.

[+BUGFIX] Testing: Fix code coverage collection in web testrunner

The use of blacklisting lead to proxies being included in code coverage collection. Switched to a whitelisting approach.

In addition the AbstractTestRunner has been removed.

Change-Id: I4d7179a8c80c88f17054d073c4fea33cdce0dbc8

Fixes: #10467

# History

# #1 - 2010-11-11 13:43 - Karsten Dambekalns

- Status changed from New to Accepted
- Assigned To set to Karsten Dambekalns
- Target version set to 1.0 alpha 13
- % Done changed from 0 to 80

We no longer use the PHPUnit FLOW3 package, but rely on PHPUnit 3.5 (at least). In addition the configuration for PHPUnit when used from the command line or through Phing makes correct use of whitelisting now.

The web test runner, well, it should be adjusted, probably.
