Created a suggestion, and spoke it through with Christian. For now we came up with a structure like:

```
`-- Resources
  |-- Public
    |-- Icons
    |-- Images
    |-- JavaScript
    | |-- Aloha
    | |-- Configuration
    | |-- Core
    | | |-- History
    | | |-- Login
    | |-- Dummy
    | |-- Ext
    | |-- Frontend
    | |-- Modules
    | | |-- Content
    | | | |-- AlohaConnector
    | | | |-- Edit
    | | |-- Layout
    | | |-- Management
```

```

| | |-- Configuration
| | | `-- ModuleConfiguration.js
| | |-- Core
| | | `-- Module.js
| | |-- Stores
| | | |-- ManagementGridStore.js
| | | `-- ManagementTreeStore.js
| | `-- UserInterface
| |     |-- Tree
| |     | `-- ManagementTreeComponent.js
| |     `-- ManagementView.js
|-- Stores
| `-- UserInterface
|     |-- BreadcrumbMenu
|     |-- BreadcrumbMenuComponent.js
|     `-- ButtonComponent.js
`-- StyleSheet

```

We came up with Modules/ModuleName/Core/Module.js to have the Module.js file inside the module folder. Otherwise we would have something like Modules/NameModule.js and a Modules/Name/ folder (like with the BreadcrumbMenuComponent). This should be discussed though.

Might be good to discuss this a bit deeper next week.

Attached is a zip with this structure to use with the tree command in linux to create this tree schedule, for those who want to play around ;-)

I don't have a strong opinion on this, but if it doesn't get too complicated for you guys, I'd say: yes, sure. It might even be easier then to keep Aloha in sync with the official Git repository.

About the structure: I'd call the "StyleSheet" directory "StyleSheets".
