

## TYPO3.Fluid - Bug # 11028

<b>Status:</b>	Closed	<b>Priority:</b>	Should have
<b>Author:</b>	Armin Ruediger Vieweg	<b>Category:</b>	
<b>Created:</b>	2010-11-23	<b>Assigned To:</b>	
<b>Updated:</b>	2011-05-06	<b>Due date:</b>	
<b>Has patch:</b>			
<b>Affected Flow version:</b>			
<b>Subject:</b>	Output of domain and property validator error messages performs always an default error		
<b>Description</b>			
<p>Hello guys,</p> <p>I've seen a strange error with validators and its error messages.</p> <p>When a domain validator and a property validator has been triggered at the same time, the output shows a third error which is basically located in <code>Tx_Extbase_Validation_PropertyError</code>:</p> <pre>1242859509: Validation errors for property "title"</pre> <p>The solution to hide this needless error was an if-condition in fluid-template, but this seems to be very dirty:</p> <pre>&lt;f:form.errors for="myFormname"&gt;   &lt;f:for each="{error.errors}" as="errorDetail"&gt;     &lt;f:translate key="{errorDetail.code}" default="{errorDetail.message}" /&gt;&lt;br /&gt;   &lt;/f:for&gt; &lt;/f:form.errors&gt;  &lt;f:form.errors&gt;   &lt;f:for each="{error.errors}" as="errorDetail"&gt;     &lt;f:if condition="{errorDetail.code} != 1242859509"&gt;       &lt;f:translate key="{errorDetail.code}" default="{errorDetail.message}" /&gt;&lt;br /&gt;     &lt;/f:if&gt;   &lt;/f:for&gt; &lt;/f:form.errors&gt;</pre> <p>If you ask why there are two <code>&lt;f:form.errors /&gt;</code>: This is because property error messages and domain error messages must have an seperatly output.</p> <p>Maybe I'm wrong and there exists a very much more elegant solution, but if not, then it seems to be an error that the default error 1242859509 gets displayed.</p> <p>Kind Regards</p>			

### History

#1 - 2011-05-06 10:35 - Sebastian Kurfuerst

- Status changed from New to Closed

fixed with new Property Mapper in FLOW3, will be backported.
