TYPO3.Fluid - Bug # 11101

Status:	Resolved	**Priority:**	Should have
Author:	Martin Helmich	**Category:**	Widgets
Created:	2010-11-26	**Assigned To:**	Bastian Waidelich
Updated:	2010-12-02	**Due date:**	
Has patch:			
Affected Flow version:			
Subject:	Pagination widget creates incorrect absolute URLs		
Description			

Currently, the paginate widget creates absolute URLs. However, if your TYPO3 is installed in a subdirectory of the document root, this is apparently not respected when generating the URLs.

So, the widget creates URLS like

http://localhost/index.php... instead of
http://localhost/xyz/index.php

Is there actually any reason to use absolute URLs instead of relative ones?

Problem occurs with version 1.3.0beta1a.

Best regards,
Martin Helmich

Does the patch you provided, fixes the issue?

#2 - 2010-11-26 17:42 - Martin Helmich

Ah, sorry, I forgot to mention the patch. The patch fixes the issue by generating relative URLs instead of absolute ones.

However, the more I think of it... Apart from the question whether absolute or relative URLs are better, this is probably more a problem of the UriBuilder class, is it?

No problem. In the meantime it's committed and the widget.uri VH is fixed as well.

That's right..

I'm closing this issue for now. Please open up another ticket, if you encounter other problems with the UriBuilder
