Subject: Wrong code in getting started tutorial

Description

In Chapter 8. Controller there is wrong/old code inside SetupController class.

The example shows

```
$blog = $this->objectFactory->create('F3\Blog\Domain\Model\Blog');
```

but this property doesn't exist. The current way is to use

```
$blog = $this->objectManager->create('F3\Blog\Domain\Model\Blog');
```

I found this error in the example of the GettingStarted package (in Private/CheatSheet/code) too.
