**Subject:** Class GravatarViewHelper extents from wrong class BlogExample

### Description

I copied the blog example from the cheatsheet folder into a regular application folder and call example.com/blog/post and got this error

```
Fatal error: Class 'F3\Fuild\Core\ViewHelper\TagBasedViewHelper' not found
```

Change

```
class GravatarViewHelper extends \F3\Fuild\Core\ViewHelper\TagBasedViewHelper {
```

into

```
class GravatarViewHelper extends \F3\Fuild\Core\ViewHelper\AbstractTagBasedViewHelper {
```

should help

### History

#### #1 - 2010-12-09 23:10 - Stefano Kowalke

I just realized, that I used an outdated version of the blog example which I downloaded as mentioned in the Getting Started tutorial. So this issue can be closed.

#### #2 - 2011-09-16 11:31 - Robert Lemke
