TYPO3.Flow - Bug # 11621

Status:	Resolved	**Priority:**	Should have
Author:	Bastian Waidelich	**Category:**	- Testing -
Created:	2010-12-21	**Assigned To:**	Bastian Waidelich
Updated:	2010-12-21	**Due date:**	
PHP Version:			
Has patch:			
Complexity:			
Affected Flow version:			
Subject:	Fatal error in ObjectManagerTest		
Description			

When running the FLOW3 testrunner, in about 20% of the cases I'm getting a fatal error "Cannot redeclare class [XYZ]" where [XYZ] is a mock class name like "BarClass4d107922cd5f8".
The reason is probably, that we're using uniqid() to create the class names, which seems - at least on windows - not to be as unique as it should be..

[+BUGFIX] FLOW3 (Testing): Use better uniqid() in ObjectManagerTest

On Windows successive calls of the PHP function uniqid() seem to create the
same string in certain circumstances.
In the ObjectManagerTest we use uniqid() to create mock class names.
This leads to a fatal error in about every fifth execution of the testrunner on
my machine.
This is fixed by specifying the "more_entropy" parameter and prefixing the
id with a random number.
