

TYPO3.Flow - Bug # 12266

Status:	Rejected	Priority:	Should have
Author:	Soren Malling	Category:	Persistence
Created:	2011-01-15	Assigned To:	Karsten Dambekalns
Updated:	2011-03-21	Due date:	
PHP Version:			
Has patch:			
Complexity:			
Affected Flow version:			
Subject:	AccountRepository QueryResult not reflecting correct result		
Description			
<p>This might be me, misunderstanding the queryResult return of a findAll function from <code>\F3\FLOW3\Security\AccountRepository</code> but here goes:</p> <p>Debugging the output of <code>\$this->accountRepository->findAll()</code> (using <code>\F3\var_dump</code>) i get the following dump</p> <pre>F3\FLOW3\Persistence\QueryResult [prototype] dataMapper => F3\FLOW3\Persistence\DataMapper [singleton][filtered] persistenceManager => F3\FLOW3\Persistence\PersistenceManager [singleton][filtered] query => F3\FLOW3\Persistence\Query [prototype][filtered] queryResult => NULL</pre> <p>from what I see, my queryResult (the resulting objects?) is empty. But adding the <code>"->toArray()"</code> function (or parsing it through <code><f:for ..><f:debug.. in fluid</code>) I get my expected objects.</p> <p>So, from my view, it looks like resulting objects isn't attached to the queryResult property?</p>

- Category set to Persistence
- Status changed from New to Rejected
- Assigned To set to Karsten Dambekalns
- Target version set to 1.0 beta 1

If you `var_dump()` it, the QueryResult is not initialized. If you use `toArray()` or iterate over the QueryResult, things will work as expected.
