<b>Has patch:</b>	Yes		
<b>Subject:</b>	translate viewhelper should have optional parameter extensionName		
<b>Description</b>			
<p>The translate view helper works great bug would be even better if it would be possible to add the extensionName as argument.</p> <p>examples:</p> <ol style="list-style-type: none"><li>1) Using a standalone view with Tx_Fluid_View_StandaloneView makes it impossible to work with translationViewHelper without duplicating translations</li><li>2) using example #1 can sometimes lead to have no extensionName available, therefore no translation can ever happen</li><li>3) having many extension in one project but very often the same translations leads to the problem having duplicate keys.</li></ol> <p>[pending in v4mvc list]</p>

[FEATURE] TranslateViewHelper accepts package argument

This change allows the TranslateViewHelper to accept an optional package argument, which is passed to the Translator class for lookups. If the package argument is NULL, the view helper will default to the current controller's package key.
