| <b>Subject:</b>        | Enable lower case URLs   |                     |              |
| <b>Description</b>     | <p>Currently FLOW3s routing mechanism is case sensitive. As All Packages and Controller start with an upper case letter, this leads to URLs like <a href="http://domain/MyPackage/MyController/Default">http://domain/MyPackage/MyController/Default</a> which is rather confusing.</p> <p>Although upper case letters are supported in URLs (after the host part that is), we decided to go with lower case URLs for now as it's common practice.</p> <p>When needed we'll add some configuration option to re-enable case sensitive URLs globally or on a route(part) basis.</p> |                     |              |
| <b>Related issues:</b> | related to TYPO3.Flow - Feature # 2237: URLs can only be lowercase <b>Resolved</b> <b>2008-11-27</b>   |                     |              |

### Associated revisions

#### Revision db19a41c - 2008-08-11 21:03 - Robert Lemke

- FLOW3: (MVC) Implemented support for case insensitive URLs. The package key and controller component name can now be any case, the action name must still be study caps (like the action method name). Resolves #1253.
- FLOW3: (Package) Added new method `getCaseSensitivePackageKey()` to the package manager
- FLOW3: (Session) Exceptions which occur during `session_write` are now converted into FLOW3 exceptions
- TYPO3: Added some helpful output to the different controller stubs and adapted the routes configuration to the recent changes in the MVC routing.

### History
