| **Subject:** | Make it possible to suggest an identifier for a new node | | |

**Description**

To make the gap between a DDD domain object eventually having it's own UUID already and the CR persisting that object as a node, it should be possible to suggest an identifier to the CR when creating a node.

- check what the spec says
- think about a clean & lean way of doing this
- implement :)

**Revision 0bbfeab5 - 2008-08-22 19:22 - Karsten Dambekalns**

PHPCR:
- added third optional parameter to Node.addNode(), relates to #1291

TYPO3CR:
- Node.addNode() now accepts a third optional parameter allowing to suggest an identifier for the new node, fixes #1291
- Node.addNode() now uses the requested nodetype for relative paths pointing away from the current node

Ok, the spec says (basically), what an identifier must conform to and when it is needed. It does not prohibit suggesting one, although it does of course not have such functionality.
