TYPO3.Fluid - Bug # 13045

Status:	New	Priority:	Should have
Author:	Armin Ruediger Vieweg	Category:	
Created:	2011-02-15	Assigned To:	
Updated:	2011-10-21	Due date:	
Has patch:			
Affected Flow version: FLOW3 1.0.0			
Subject:	Entity decode of strings are different between if-conditions and output of variable		

Description

If I assign the following to a variable:

<ul class="csc-menu csc-menu-3"><li class="csc-section"&gt

And want to work with this string in an own viewhelper, I have to html_entity_decode it. If I not do this, the submitted string depends where I call the viewhelper.

Fluid-Template Example 1:

Cool String: {own:viewhelper subject='{variables}'}

My viewhelper gets the subject: <ul class=" ..."
 as expected.

Fluid-Template Example 2:

<f:if condition="{own:viewhelper subject='{variables}'}">
<f:then>
...

Note: My viewhelper counts some html tags in the string and returns an integer.

The given subject is now: <ul class=" ...

This is generally no big problem, but it is a little bit inconsistent and not documented.

Kind Regards
