TYPO3.Flow - Bug # 1315

Status:	Closed	**Priority:**	Must have
Author:	Matthias Hörmann	**Category:**	MVC
Created:	2008-08-22	**Assigned To:**	Bastian Waidelich
Updated:	2010-10-20	**Due date:**	

PHP Version:	
Has patch:	
Complexity:	
Affected Flow version:	
Subject:	Routing: URLs with/without trailing slash change meaning of relative links

Description

Both the URLs e.g. /typo3cr/setup and /typo3cr/setup/ call the same controller code.

If a relative link to e.g. "install" is created in that code it will point to either
"/typo3cr/install" or "/typo3cr/setup/install" depending on the URL used.

Suggested solution:

Add the trailing slash before calling the controller code so both versions
give the same result.

The problem is not the routing mechanism, but the way browsers resolve relative links.
So there won't be away around a base-tag like it's needed in current "realurl"-websites (well, apart from using absolute urls).

I'll leave the ticket open as a reminder, that we need to allow leading slashes in routes. Right now they're ignored, but it probably should be possible to create "mycompany/about-us.html" as well as "mycompany/about-us/".

By the way: We're currently working on a link-helper which generates correct links based on configured routes, so you won't have to deal with slashes anyways.

The problem is with the way browser interpret some URLs. It is correctly solved by using a base tag together with helper for link/URI generation. The "hidden feature" is now feature request #2738.
