Sprint Focus:			
Subject:	tt_content.search.20 should be done with the new FORM mapping		

Description

Problem:
Currently the standard CSS_Styled_Content search form, tt_content.search.20 is using the old mapping. This should be changed, so it uses the new mapping.

One of the problems with using the new mapping is the prefix is always used in the field names. It should be configurable to turn the prefix off. In the core the search logic is done in the class ??.
