Subject:	Configure accessRoles options for pages		

Description

We are already able to configure a page as "hidden", and set start and stop time.

However, we are not yet able to configure the "AccessRoles" for the page in the Content module. This should be fixed.

We need to keep in mind that this is partly security related and partly a rendering issue. E.g. a page that is only accessible by an admin, should not even be loaded from the CR if no admin is logged in. But it must be possible to render the menu entry (similar to "showAccessRestrictedPages" in v4 that could point to a login form).
Apart from that it must be possible to simply hide pages in the menu ("notInMenu").

In the long run we probably need ACLs for single properties even.

Hereby a simple UI concept for adding access roles to a node. By using the Visual Search library we can actually add support to search for roles & session states (like 'display at login') using an easy to use autosuggest.

Because this field is still small I'd suggest to just add it to the inspector panel for content elements / pages.

The (1) mark is the Visual Search element
