Sprint Focus:			
Subject:	Database analyzer gives stupid Alter statements by comparing existing schema with database.sql		

Description

When a database schema exists (even if you have just dumped the database.sql file into the database) the compare with database.sql function offers alter statements that do not really differ from the exisiting schema.

Examples below:
Offers:
ALTER TABLE be_groups CHANGE uid uid int(11) unsigned NOT NULL auto_increment;
Current Schema:
Current value: int(11) unsigned DEFAULT '0' NOT NULL auto_increment
Offers:
ALTER TABLE be_groups CHANGE pid pid int(11) unsigned NOT NULL default '0';
Current Schema:
Current value: int(11) unsigned DEFAULT '0' NOT NULL

So it would be just a no operation.

Use an existing Typo3-Database-Schema and upgrade to 3.7rc?
