<b>Subject:</b>	Disable all nag screens		
<b>Description</b>			
<p>When one is starting to become an expert in the backend, the nag screens start to get really annoying. For example, the warning that comes when one switches a content type / page type. Or the warning in the install tool... Their should be an option to disable these warnings.</p> <p>(issue imported from #M1078)</p>

### History

#### #1 - 2005-05-23 09:14 - Sebastian Kurfuerst

Hi, could you please make a list which "nag screens" you mean? (It is easier to change things then)

- Alert when changing content elements
- Alert when changing in FlexForms
- Alert in the install tool

I think this option to disable the "nag screens" should be set either in the user preferences (user->setup) or in the user TSconfig. Any opinions on that?

#### #2 - 2005-05-23 09:23 - Thomas Hempel

I think the most annoying message is the one that appears when one changes the content type. It could be useful if admin users can change the behaviour in the setup but not the "normal" user.

For them the admin should make the decision if the nag screens should appear or not.

By the way, another message pops up on deleting elements.

Another nag screen that should detachable is the alert when inserting (copy/paste) content elements and pages (also on copying with clipboard).

Greetings,  
Thomas

#### #3 - 2005-06-03 23:09 - Rupert Germann

at least for me the "copy/move/delete" warnings are very helpful and I won't miss them.

I can remember many occasions where reading this messages saves me a lot of work.

but I agree with Thomas that the "onChange" messages in "type" fields should be detachable.  
-> f.e. with an extra option in TCA which could be made configurable by extensions authors.

**#4 - 2005-06-06 09:42 - Thomas Hempel**

OK, a delete warning makes sense! :)

Greetings,  
Thomas

**#5 - 2005-10-17 11:13 - Sebastian Kurfuerst**

Maybe these warnings could be grouped into some groups which could be configured afterwards then?

- Deletion warnings
  - change of CE warning
  - copy / paste content elements/pages/ (also to clipboard)
- what else?

I don't think the onChange warning of the CE should be set in TCA, as this behavior should be changeable for users in User/Group TSConfig. If it was possible to change it in TCA, some authors would allow it, some others wouldn't, and this inconsistency could confuse some users.  
Greetings, Sebastian

bitmask in userTSConfig  
, disable nochangealert in type fields

**#7 - 2005-10-18 18:15 - Sebastian Kurfuerst**

The attached patch solves the issue. It implements the User TSConfig Option:  
options.alertPopups

which is a bitmask, setting which alert boxes should be shown.

- 1 - onTypeChange
- 2 - copy/move/paste
- 4 - delete
- 8 - frontend editing
- 128 - other (not used yet)

Default: all.

TODO: TSConfig Reference NEEDS TO BE UPDATED

**#8 - 2005-10-25 16:27 - Sebastian Kurfuerst**

DOCUMENTATION:

The option supersedes the configuration option  
options.noChangeAlertInTypeFields which is removed completely.

user TSconfig: "OPTIONS"

alertPopups

bitmask

configuration which javascript alert popups should be shown:

- 1 - onChange
- 2 - copy/move/paste
- 4 - delete
- 8 - frontend editing
- 128 - other (not used yet)

Default: 255 (all)

**#9 - 2005-12-14 20:56 - Peter Niederlag**

Nope. Default definitely not all(255)!  
Confirm on delete or move has already saved me (and probably some users?) hours of work. ;)

This change in default-behaviour would require feedback from large user-base imho.

Oher than that, sounds good. I'll try the patch.

**#10 - 2005-12-14 21:02 - Sebastian Kurfuerst**

Hi Peter,  
"default 255" means that *all* warnings will be shown.  
Greetings, Sebastian.

**#11 - 2005-12-23 01:16 - Sebastian Kurfuerst**

fixed in CVS.
