

Core - Bug # 14875

Status:	Closed	Priority:	Should have
Author:	Metin Yilmaz	Category:	Frontend
Created:	2005-07-22	Assigned To:	
Updated:	2014-07-10	Due date:	
TYPO3 Version:	3.8		
PHP Version:			
Complexity:			
Is Regression:	No		
Sprint Focus:			
Subject:	if i use "config.locale_all = tr_TR", links in FE are broken		
Description			
<p>Maybe i Found a bug (i dont now if it is a Typo3, PHP or MySQL Bug?).</p> <p>I have a site in german and turkish, it works without problems (Typo 3.8, server at mittwald Medien, Germany). I use UTF-8 in database and TS Setup. I can switch to turkish with config.language= tr in TS Setup.</p> <p>If i set the language and country settings for turkish in TS Config Setup of root page with</p> <p>"config.locale_all = tr_TR"</p> <p>then i have names of days etc. in turkish too, but all of my links (internal or external)are in the FE broken! In BE anything looks ok...</p> <p>I made a lot of tests with the same problem: Typo3 3.7, 3.8 and with PHP 4.3.0, PHP 4.3.3, MySQL 3.23, MySQL 4.1. Same Problem with Typo3 LiveCD.</p> <p>Thanks a lot in advance!</p> <p>Metin Yilmaz</p> <p>I found only some discussion from 2003 like this:</p> <p>http://lists.typo3.org/pipermail/typo3-debian/2003-August/000329.html</p> <p>I found, that if i dont use RTE or htmlArea, and if i write "<link somedomain.tld>Test<link>" in a content element, that meens with small "i", then the links are working in the FE. So i think, maybe its a problem with the big "I". Because in turkish we have a "I with point" and a "i without point"...</p> <p>(issue imported from #M1303)</p>			

History

I do add my note here, although it does extend the view-ankle a bit. I did post my problems belonging to turkish language to news-lists, both german and english, but none could give me some advise, so:

Indeed, the "I" is causing troubles, since obviously typo3 seems to lowercase all markups in the forms internally for instance. I'm not into the code just atm. so please accept these "tutorial-meant" examples:

When there is a mark for a form-label like ###YOUR_CITY### in my template which might look like this in the output (en, de, tr): "Your city:", "Ihre Stadt", " ".

So I go back to the template and change the mark like this: `###YOUR_CiTY###`. Result: "Your city:", "Ihre Stadt:", "Kentiniz:". But in cases of marks containing more than one "I" this really starts getting "stupid", because it ends up in a quiz: I have to test if for example `###TRY_IT_AGAIN###`, `###TRY_iT_AGAIN###`, `###TRY_IT_AGAiN###` or `###TRY_iT_AGAiN###` makes my label appear. Why should lower or upper make a difference? Turkish character set is similar to the American character set but has some additional characters. In this case I just mention the `'㟌'`, which is written as 'İ' in uppercase, **not** being the same as 'i' or `'㟌'`. You see the disaster we face?

I don't think that the broken markers are caused by core functions. Methods for manipulation marker arrays are provided by `tslib_cObj`, but they do not use `strtolower` or `strtoupper` (except one, if specifically requested to do so).

Therefore, case shifting operations are performed by the plugins and need to be fixed in each extension.

Perhaps, coding guidelines should recommend the use of lower case iso-8859-1 markers. `tslib_cObj::caseshift` is a locale-safe method for case shifting iso-8859-1 markers.

#4 - 2006-03-28 04:00 - Stanislas Rolland

The attached patch fixes the problem with the RTE. This will work for entering new data or using the RTE to correct old data.

It will not fix the problem of correctly rendering old data with a `tr_TR` locale.

The patch was integrated in TYPO3 4.0RC3.

#5 - 2006-03-28 10:34 - G Cenk

Sorry for my misleading information about lowercasing all markups in the forms and thanks for solving this problem in `sr_feuser_register` which was in my case...

#6 - 2008-02-19 15:08 - Martin Kutschker

This seems to be fixed in 4.0. Other occurrences of the basic problem may persist.

#7 - 2014-07-10 14:33 - Chris topher

- Target version deleted (0)
- TYPO3 Version changed from 3.8.0 to 3.8
- PHP Version deleted (4)
- Is Regression set to No
