Subject:	Extension Manager Feature Request: Backend Frameset does not reload when installing backend modules		
Description			
<p>When a new backend module is installed, it can not be used before the url containing the backend has been completely reloaded, i assume because the main frameset isnt reloaded or updated automaticly complete and doesnt contain some needed reference. it would be nice to have the extension</p> <p>(issue imported from #M1642)</p>

Automatically reloading might be a bad idea, since an admin may want to see messages produced by the installation. So it may be better to show a link for reloading the BE.

Any other ideas?

#2 - 2006-07-23 23:49 - Kay Stenschke

another way could be to show these informations inside a popup-window. there could be a button "close popup and update backend" within the popup (maybe even additional to an alternative simple "close popup"-button (for the case that the installation failed due to possibly not met dependencies, or the user doesnt want the backend refreshed for other reasons).

#3 - 2007-05-09 12:01 - Ingo Renner

fixed in SVN
