Subject:	DB Check -> Manage Reference Table doesn't check if table 'sys_refindex' exists				
Description					
<p>The BE Modul DB Check -> Manage Reference Table doesn't check if the table 'sys_refindex' exists. If the table isn't in the DB and you click 'Update now!' you get as feedback from the module '... records from ... tables were checked/updated.'</p> <p>A little error-message for the user would be nice.</p> <p>This is especially annoying together with bug 2511, that causes that the sys_refindex table isn't created by the install-tool.</p> <p>Keep up the great work</p> <p>(issue imported from #M2701)</p>

As bug #15587 has been fixed for RC2, I think this bug isn't relevant any more.

TYPO3 never checks for table existence before using it, so I don't think it should do this differently in the Manage Reference Table module.

Bug closed.
