TYPO3 Version:	4.0
PHP Version:	5
Complexity:	
Is Regression:	
Sprint Focus:	

Subject:	Allocating far toooo much memory

Description

I want to use the "Connect to the current mirror and retrieve the current list of available plugins from the TYPO3 Extension Repository" function in the extension manager "Import Extensions"

But every time I am pressing the "Retrieve/Update" button, there is an error message:

"Fatal error: Allowed memory size of 16777216 bytes exhausted (tried to allocate 290 bytes)in /is/htdocs/wp1029925_B4Q4FLWCOF/www/typo3/mod/tools/em/index.php on line 1083"

What the hell is needing so much memory?

Maybe there is a way for you to solve this problem for my webspace provider won't give me more memory.

(issue imported from #M2727)
