

TYPO3.Flow - Bug # 1644

Status:	Resolved	Priority:	Must have
Author:	Karsten Dambekalns	Category:	MVC
Created:	2008-10-03	Assigned To:	Karsten Dambekalns
Updated:	2010-10-20	Due date:	2008-10-03
PHP Version:			
Has patch:			
Complexity:			
Affected Flow version:			
Subject:	Redirects after StopAction exceptions not carried out correctly		
Description			
<p>When calling the backend of the TYPO3 package without a valid login one would get the backend HTML delivered - and after that would be the redirect HTML produced by <code>getPreparedController()</code> in case authentication is required. The request inside that method itself was correct, including 302 status code and location header. But, since the <code>StopAction</code> exception was ignored, the dispatcher got the <code>LoginController</code> next and continued processing the request, overriding the "failure", and bang - here you are.</p>

Revision 15722430 - 2008-10-03 16:35 - Karsten Dambekalns

FLOW3:

- fixed handling of `StopAction` exception in MVC dispatcher by marking the request as dispatched when an `AuthenticationRequired` exception is caught in `getPreparedController()`; fixes #1644.
