

TYPO3.Flow - Feature # 1676

Status:	Resolved	Priority:	Could have
Author:	Bastian Waidelich	Category:	
Created:	2008-10-11	Assigned To:	
Updated:	2010-10-20	Due date:	
PHP Version:			
Has patch:			
Complexity:			
Subject:	FLOW3, Persistence: support for "magic finder methods"		
Description			
<p>it would be great, if the base repository would offer interceptor methods returning a subset of stored objects based on properties. This could look something like:</p> <pre>\$customerRepository->findByName('Skårhøj');</pre> <p>returning an array of customer objects with the property "name" of "Skårhøj". And:</p> <pre>\$customerRepository->findOneByName('Skårhøj');</pre> <p>to return the first matching object. And maybe something like:</p> <pre>\$customerRepository->find(\$id);</pre> <p>to return a single object with a matching identifier property.</p>
