<b>Sprint Focus:</b>			
<b>Subject:</b>	Move the BE menu generation code into a separate class so it can be used from other classes		
<b>Description</b>			
<p>currently the backend menu on the left or top is rendered by a script class whcih can not be reused in other places as it renders a whole html document. To avoid duplicating code and being able to reuse the menu generation from other classes it is required to move the menu to a separate class.</p> <p>It must also be assured that the included class then does not output or load anything else itself.</p> <p>(issue imported from #M6583)</p>
