Sprint Focus:			
Subject:	After #22546 setting [BE][CompressionLevel] crashes Backend Design		
Description			
The Backenddesign is crashed as you can see on http://typo.pfadfinder-weeg.de/typo3/ also after the login the design does not work. It is not possible to change anything.			
(issue imported from #M14582)

Having a look at your source, you have [BE][CompressionLevel] set:

```
../typo3temp/compressor/ext-all-notheme-ce48a38ef3fa7a8a196ad140c5ee728d.css.gzip?1275419916
```

Setting it to 0 will avoid the error (which is no solution, but just a workaround).

#2 - 2010-06-01 22:39 - Christian Leicht

Have you setup the mod_rewrite rules in .htaccess

(read typo3_src/NEWS.txt)

#3 - 2010-06-01 22:50 - Chris topher

Resolved, no change required:

To solve the problem add the following to your .htaccess file as described in misc/advanced.htaccess:

```
<FilesMatch "\.js\.gzip$">
  AddType "text/javascript" .gzip
</FilesMatch>
<FilesMatch "\.css\.gzip$">
  AddType "text/css" .gzip
</FilesMatch>
AddEncoding gzip .gzip
```
