Updated:	2010-08-06	**Due date:**	
PHP Version:	4.3		
Complexity:			
Sprint Focus:			
Subject:	Make backend.php the default backend		

Description

now that the backend.php is mostly finished it is time to make it the default backend

The attached patch takes care of making backend.php the default backend. For those who want to stay with the old one (alt_main.php) it introduces backend_old as new interface, this can then be set using the install tool.

using backend.php we miss he top frame, right?

how .. where will extdeveval load it's little top menu?

(now it does't get shown...)

extdeveval's top frame menu will indeed not work with backend.php, that's something we need to trade in for the cleaner backend. Instead the backend allows extensions to place so called toolbar-items into that area (toolbar). So extdeveval could be modified to provide such a toolbar-item with drop down menu.
