TYPO3 Version:	4.1		
PHP Version:	5.2		
Complexity:			
Is Regression:			
Sprint Focus:			
Subject:	Submodules of Web module can't work with mod.php and the _DISPATCH system		
Description			
<p>When using the new mod.php system for backend modules, problems arise when module is a submodule of Web module.</p> <p>Error is like:</p> <p>Value "web_utestmodM1&id=123" for "M" was not found as a module.</p> <p>Create extension with kickstarter, add a module as submodule of Web module.</p> <p>Change conf.php, ext_emconf.php, index.php as described by docs.</p> <p>Select module from the list works ok.</p> <p>As soon as you select a page in the page tree you get something like:</p> <p>Value "web_utestmodM1&id=123" for "M" was not found as a module.</p> <p>(issue imported from #M7265)</p>

History

#1 - 2008-01-25 11:14 - Andrea Boselli

Whops, made error in writing down report.

The error I get is:

Value "web_utestmodM1?id=123" for "M" was not found as a module

(Notice the ? instead of & I wrote earlier... btw, THIS is the problem)

#2 - 2008-08-29 21:23 - Christian Kuhn

I remember a similar issue that lead to this error message and it had been solved.

However I just created a tiny test extension (just a submodule of web) and can not confirm the mentioned error in current trunk (rev 4024) now.

I think we can close this one.

#3 - 2008-09-01 16:46 - Dmitry Dulepov

Nope, we do not close. I confirm the bug. The problem is related to page tree.

#4 - 2008-12-08 21:28 - Steffen Kamper

the bug isn't complicate. The only error page-tree does is adding
?id =xyz

So the Url looks like

mod.php?M=web_txtemplavoilaM1?id=1

correct would be

mod.php?M=web_txtemplavoilaM1&id=1

I will dig into and make a patch

#5 - 2008-12-08 21:41 - Steffen Kamper

here is the patch

#6 - 2008-12-09 10:30 - Steffen Kamper

more complete patch is attached.

#7 - 2008-12-18 19:43 - Steffen Kamper

committed to trunk and 4_2, rev 4570 / 4571
