COMMIT PART 1

- FLOW3: Implemented a YAML configuration source, resolves #1852
- Globally refactored code and converted configuration files to use the new YAML configuration format

Note: FLOW3 is now getting even slower because the whole YAML parsing results are not cached yet.

You can still use .php based configuration but it is recommended to switch over to YAML ASAP.

Documentation and speed improvements follow

- Status changed from New to Accepted

Did some profiling to see how expensive the usage of configuration containers is (instead of using plain arrays). See attached screenshot for the results while just generating 10000 nested configuration options.
