TYPO3.Fluid - Bug # 1929

Status:	Resolved	Priority:	Must have
Author:	Sebastian Kurfuerst	Category:	
Created:	2008-10-31	Assigned To:	Sebastian Kurfuerst
Updated:	2010-10-20	Due date:	
Has patch:			
Affected Flow version:			
Subject:	HTMLSPECIALCHAR OUTPUT		
Description			

HTMLSpecialChar has to be switched on somewhere (where?), and then each view helper will automatically htmlspecialchar the output coming from ObjectAccessors. ("render"-method in ObjectAccessor)

History

#1 - 2009-01-27 00:34 - Thomas Allmer

I'm just curious - who will needs this?

I mean we all should use UTF-8 right?

#2 - 2009-01-29 09:48 - Sebastian Kurfuerst

The problem is the following:

- if someone writes something like {customer.name}, then sometimes HTML output should be escaped... The question is how to do this nicely.

Greets,

Sebastian

#3 - 2009-04-17 10:12 - Bastian Waidelich

IMHO this should not be done globally. In some cases you don't want to htmlspecialchar variables.

Besides, Fluid should not only work for HTML/XML based templates. So what about

<f3:format.escape>{customer.name}</f3:format.escape>

or{f3:format.escape(customer.name)}

or{customer.name, f3:format.escape}

on the other hand.. maybe it should be a default and possibly be switched off if needed..

#4 - 2009-05-14 11:57 - Sebastian Kurfuerst

- Category set to 444

- Status changed from New to Accepted

- Priority changed from Should have to Must have

#5 - 2009-05-14 12:02 - Sebastian Kurfuerst

- Target version set to 1.0.0 alpha 1

#6 - 2009-05-22 16:08 - Sebastian Kurfuerst

- Status changed from Accepted to Resolved

- Assigned To set to Sebastian Kurfuerst

- % Done changed from 0 to 100

- Branch set to v5
