Updated:	2008-10-14	Due date:	
TYPO3 Version:	4.2		
PHP Version:	5.0		
Complexity:			
Is Regression:			
Sprint Focus:			
Subject:	When inserting prices in tx_commerce the input is always transformed into NaN##		
Description			
jsfunc.js seems to interpret prices incorrect. Examples: 122.00 is transferred into "NaN00" 1888.12 is transferred into "NaN12" 0 is not transferred. Blank neither. (issue imported from #M9524)

duplicates Core - Bug # 19423: Edit in Rich Text Editor - Button doesn't work...		Resolved	2008-10-06

History

#1 - 2008-10-10 10:46 - Stefano Cecere

i confirm this bug!
(on common decimal fields!!!)

#2 - 2008-10-10 11:18 - Stefano Cecere

it seems the bug is in line 172 of jsfunc.evalfield.js

theVal=this.parseInt(this.noSpace(theVal))+TS.decimalSign+dec.substr(0,2);

it's this function call that returns the NaN00

#3 - 2008-10-10 11:25 - Stefano Cecere

is seems that that TS.decimalSign variable is undefined .. where does it come from?

#4 - 2008-10-10 11:29 - Stefano Cecere

yes the problem is that TS.decimalSign undefined...

#5 - 2008-10-10 12:08 - Steffen Kamper

is defined in jsfunc.tbe_editor.js

#6 - 2008-10-10 12:19 - Stefano Cecere

yes i found it...:

```
function typoSetup () {  
    this.passwordDummy = '*****';  
    this.decimalSign = '.';  
}  
var TS = new typoSetup();
```

but checking the whole script running (via Firebug) TS.decimalSign is undefined when it is called jsfunc.evalfield.js

the bug happens either in FF 3 and Safari 3 (so it isn't another FF 3 quirk)

#7 - 2008-10-10 12:25 - Stefano Cecere

could it be it is because jsfunc.evalfield.js is loaded in the main page header, and jsfunc.tbe_editor.js in the sub sub iframe of the page?

#8 - 2008-10-10 16:26 - Christian Hernmarck

Maybe same as #19423 ?

#9 - 2008-10-10 17:12 - Stefano Cecere

yes, it is the same problem (the order of loading .js files and the TS object not instantiated)

#10 - 2008-10-14 19:32 - Michael Stucki

Duplicate.
