TYPO3 Version:	4.2		
PHP Version:	5.2		
Complexity:			
Is Regression:			
Sprint Focus:			
Subject:	Incorrect password field input value when editing Backend & Frontend users		
Description			
<p>On a Typo3 setup which has just been upgraded from a 4.1.3 version, when editing backend or frontend user properties, the password field outputs 'undefined' instead of '*****' in the new Typo3 4.2.2 interface (see screenshot attached to the issue). Password input value looks fine on a 4.2.1 setup on another machine, which makes me think we have a regression, or a problem linked to something not properly dealt with during the upgrade from 4.1.3 to 4.2.2.</p> <p>I currently have no other 4.2.2 setups to test against for reproducibility, but I will post a comment once I can install / upgrade another Typo3 setup with 4.2.2</p> <p>The passwords are properly managed by Typo3 tough, they are just not properly displayed</p> <p>Anyone so far having the very same problem with 4.2.2 ?</p> <p>(issue imported from #M9706)</p>
