<b>Sprint Focus:</b>					
<b>Subject:</b>	RTEhtmlarea does not work with IRRE after new child records were created				
<b>Description</b>					
RTEhtmlarea does not work anymore with IRRE after new child records were created while editing the parent record.					
The reason is that loading JavaScript libraries in RTEhtmlarea has changed. For IRRE disposal it's required, that these libraries are only loaded with the parent record. Otherwise each newly created child record will load these files again and break the JavaScript functionality.					
(issue imported from #M9807)
