Subject:	Make the pagetree filter a real search (autosuggest?)		
Description			
<p>The current functionality is not really useful and at least surprises editors when they see how it works. Also it does not help finding pages when they are inside a collapsed part of the tree.</p> <p>What we need to do is to make it a real search with support for title and uid, perhaps with autosuggest functionality. Once the wanted page has been found the pagetree should scroll that page into view.</p> <p>Prosit, Uschi</p> <p>duplicate of #5311</p>

I'll second that, probably just load the whole pagetree and hide the non-expanded region. Then this could be easily expanded at search without page reload.

+1 to that!
