Sprint Focus:	

Subject:	old/classic BE --> top.rawurlencodeAndRemoveSiteUrl is not a function

Description

If running the old Backend, you are not able to select the modules from the WEB Category (WEB->Page for example).
If you click on "Page" it is producing a JavaScript error Message:

"top.rawurlencodeAndRemoveSiteUrl is not a function"

Solution:
I figured out, the function is missing in the old BE javascript code.
If I add the code to the alt_main.php file it is working again.

###########

$this->mainJScode='
    .....##########
    /**
        * Function to similar to PHPs rawurlencode() which removes TYPO3_SITE_URL;
        */
    function rawurlencodeAndRemoveSiteUrl(str)   {   //
        var siteUrl = "' . t3lib_div::getIndpEnv('TYPO3_SITE_URL') . '";
        return rawurlencode(str_replace(siteUrl, \'\', str));
    }
    .....

(issue imported from #M10445)

Thanks for the solution. It fixes my 4.2.8 with old backend

#2 - 2010-05-28 19:32 - Chris topher

After the old BE was removed in #22701:

Resolved no change required.
