

Core - Bug # 20351

Status:	Closed	Priority:	Should have
Author:	André Steiling	Category:	
Created:	2009-04-23	Assigned To:	Rupert Germann
Updated:	2010-08-06	Due date:	
TYPO3 Version:	4.2		
PHP Version:	5.2		
Complexity:			
Is Regression:			
Sprint Focus:			
Subject:	Fatal error in impexp module: Call to a member function includeLLFile() on a non-object		
Description			
This bug is same as described in http://bugs.typo3.org/bug_view_advanced_page.php?bug_id=4831 .			
Steps to reproduce:			
Go to the task center module: Click on "Export Presets" and select one of them.			
Error message:			
"Fatal error: Call to a member function includeLLFile() on a non-object in /typo3_src-4.2.6/typo3/sysex/impexp/app/index.php on line 115".			
(issue imported from #M10971)			

History

#1 - 2009-08-23 16:23 - Rupert Germann

I digged a bit into this and found that this bug is present in 4.1, 4.2 and 4.3trunk but not in 4.0 (didn't test earlier versions)

The bug was introduced with the changed module initialisation (mod.php) in rev 1770

<http://forge.typo3.org/repositories/revision/typo3v4-core/1770>

simply re-adding the missing require() lines does not do the trick because then an error occurs when opening impexp via clickmenu or from the single-table-view in the listmodule.

Solution:

re-add the missing require() lines to impexp/app/index.php and also change all links pointing to "mod.php?M=xMOD_tximpexp" to the "classic" format which directly calls impexp/app/index.php.
