Updated:	2010-05-28	**Due date:**	
TYPO3 Version:	4.3		
PHP Version:	5.2		
Complexity:			
Is Regression:			
Sprint Focus:			
Subject:	TYPO3 Javascript object missing in alt_main.php		

Description
When using the classic backend in alt_main.php, links under the Web module do not work. Instead, a Javascript error is generated that says "TYPO3 is not defined" and references line 91 of typo3/js/backend.js (issue imported from #M11662)

History

#1 - 2009-08-06 21:10 - Steffen Kamper

reason is, that backend.php defines the object TYPO3 to fill it with dynamic values, this is missing in alt_main. I will make a patch soon.

#2 - 2010-05-28 19:33 - Chris topher

After the old BE was removed in #22701:

Resolved no change required.
