Subject:	HMENU - sectionIndex does not allow to select other CEs than colPos = 0		
Description	<p>Hey,</p> <p>HMENU.sectionIndex is a real cool feature, however it is impossible to modify the WHERE clause when selecting the Content Elements on that page to create the elements in the sectionIndex. Thus, this patch adds an additional</p> <p>sectionIndex.where (string + stdWrap)</p> <p>to allow to override the where clause and to specifically select items based on other criteria than the default "colPos=0 and sys_language_uid=...".</p> <p>(issue imported from #M12065)</p>

Revision af4153d9 - 2012-08-15 13:33 - Stefan Galinski

[FEATURE] HMENU - sectionIndex: where clause should be configurable

This changeset implements the sectionIndex setting "useColPos" that can be used to change the colPos query filter. A negative value drops the filter completely. Only integers are allowed as values and stdWrap is possible.

Example:

```
tt_content.menu.20.3.1.sectionIndex.useColPos = -1
```

How to test:

Add a section menu as content element to one of your pages with content spread over different columns. You will experience that only the contents from the first column are shown if they have headers. After applying the following typoscript you will get all contents inside the section menu instead.

```
tt_content.menu.20.3.1.sectionIndex.where.wrap = 1=1|
or
tt_content.menu.20.3.1.sectionIndex.where = 1=1
```
