

Core - Bug # 21338

Status:	Resolved	Priority:	Should have		
Author:	Oliver Klee	Category:			
Created:	2009-10-22	Assigned To:	Chris topher		
Updated:	2010-05-28	Due date:			
TYPO3 Version:	4.2				
PHP Version:	5.2				
Complexity:					
Is Regression:					
Sprint Focus:					
Subject:	Menu in alt_main does not react to clicks				
Description					
Steps to reproduce:					
1. Log in to the BE.					
2. enter/typo3/alt_main.php in the URL bar					
3. click on Web > Page (or any other menu item)					
Expected results:					
the page tree is shown, and no error messages on Firefox' error console					
Actual results:					
No visible result to clicks, and the following error message on the error console:					
Fehler: top.rawurlencodeAndRemoveSiteUrl is not a function					
Quelldatei: http://typo4test/typo3/alt_menu.php					
Zeile: 266					
I've tested this in the trunk and the 4.2.x branch; I don't know whether 4.1.x is affected as well.					
It looks like alt_main isn't used much anymore (or we would have had this bug report much earlier), especially not by the Core developers (alt_main isn't "dog food" anymore). So I suggest to just removed alt_main and all then-unused files for 4.3. This will also make maintenance easier.					
(issue imported from #M12312)
