Has patch:			
Complexity:			
Subject:	The MVC Framework can handle, dispatch and forward GET, POST and CLI requests		
Description			
The MVC Framework can handle, dispatch and forward GET, POST and CLI requests			

Associated revisions

Revision a0862d02 - 2008-08-04 14:40 - Robert Lemke

- FLOW3: (MVC) Renamed the Default Controller. Addresses #474
- FLOW3: (MVC) Implemented the dispatch loop: The request object now contains a flag which tells if the dispatcher needs to dispatch the request again because it contains new information about the responsible controller.
- FLOW3: (MVC) The Request object now works differently in terms of specifying the controller: Instead of passing the controller component name, it is now specified by setting the package key and controller name. Addresses #474
- FLOW3: (MVC) Implemented support for forwarding requests (see Request Handling Controller). Resolves #88 and resolves #215.
- FLOW3: (MVC) Removed the locking feature from the Request object - otherwise forwarding would not be possible.
- FLOW3: (MVC) Refactored most of the controller-related tests and fixtures.
- FLOW3: Adapted the standard routes
- FLOW3 + TYPO3: Updated the Package Meta information

History

#1 - 2008-07-01 15:32 - Robert Lemke

- Target version deleted (18)

#2 - 2008-08-04 14:43 - Robert Lemke

- Status changed from New to Resolved
- % Done changed from 70 to 100

Applied in changeset r1070.
