Sprint Focus:			
Subject:	opendocs can cause duplicate id html errors		
Description			
Problem:			
The opendocs module causes duplicate id html errors, if for example the very same page is visited with different urls.			
Solution:			
I removed the id's completely, because they seemed not to be used in any way. I wouldn't mark this as a nobrainer, because I'am not sure about the indention of adding the id's.
