Sprint Focus:	

Subject:	getSpriteIconForRecord() accepts row data which is not an array

Description

t3lib_iconWorks::getSpriteIconForRecord() has as second parameter the data row for which the icon must be found.
If an integer is passed as argument this is not detected and various actions inside the function result in a wrong icon/overlay being returned.

By forcing the argument to be an array the results are correct.

(issue imported from #M14880)

- Is Regression set to No

To add some info to this old issue:

The method getSpriteIconForRecord was introduced with 4.4.0.

The change of signature from this issue was introduced in 4.4.1 and 4.5.0. So only "4.4.0" (and some early alpha/beta releases) ever had this method with a "wrong signature".
