PHP Version:	
Has patch:	
Complexity:	
Subject:	Support simple comparisons in Setting Pointcutfilter expression

Description

The ~~Configuration~~ Setting Pointcutfilter currently matches if the specified setting evaluates to TRUE or FALSE. A nice enhancement would be the (optional) support for specifying comparisons:

    @around method(.*->.*) && setting(MyPackage:myOption:mySubOption = foo)

The value ("foo") should be compared with the actual setting using PHP's == operator.
