Updated:	2010-10-20	**Due date:**	

Sprint:	
PHP Version:	
Has patch:	
Complexity:	
Subject:	Refactor Request -> Remove *ObjectNamePattern

Description

We should refactor the MVC_Request, to move all logic out of it.
This means the following:
  - Drop $controllerObjectNamePattern (and getters/setters for it)
  - Drop $viewObjectNamePattern (and getters/setters for it)
  - Presumably, a lot of other stuff can be removed as well due to that refacoring.
  - Introduce a new $fullyQualifiedControllerObjectName (including setters/getters) which contains fully qualified Controller name,
such as F3\MyPackage\MySubPackage\Controller\SomeController
  - Analogous for $fullyQualifiedViewObjectName

The fullyQualifiedControllerName is being set by the MVC\Web\Routing\Router.

Associated revisions

Revision f3815ec8 - 2009-01-12 12:45 - Bastian Waidelich

  - FLOW3: (MVC) Implemented support for subpackages in router. Relates to #2444.

Revision fe2501ed - 2009-03-02 11:51 - Karsten Dambekalns

FLOW3:
  - removed controllerObjectNamePattern and viewObjectNamePattern from some places, refs #2444
  - added caching to routing, based on work by Bastian and Sebastian, fixes #1791
  - the Router resolve()s in lowercase and matches case-insensitive now, refs #2237
TYPO3CR:
  - adjustments to Routes.yaml suggestion

History

#1 - 2009-01-27 18:08 - Karsten Dambekalns

- Tracker changed from Bug to Task

#2 - 2009-03-24 11:59 - Karsten Dambekalns

- Status changed from New to Needs Feedback

- Assigned To set to Sebastian Kurfuerst

Hi, is this done or is there still something missing?

#3 - 2009-03-28 16:19 - Sebastian Kurfuerst

- Status changed from Needs Feedback to Rejected

It is not really "fixed", but I think we should not change it from the way it is now. I think it is better to have the controllerObjectNamePattern in the request and build the "controllerObjectName" on the fly.

Greets,

Sebastian
