

TYPO3.Fluid - Bug # 2486

Status:	Resolved	Priority:	Must have
Author:	Karsten Dambekalns	Category:	
Created:	2009-01-20	Assigned To:	Sebastian Kurfuerst
Updated:	2010-10-20	Due date:	
Has patch:			
Affected Flow version:			
Subject:	Template names not resolved correctly (file name case issue)		
Description			
<p>In r1769 I tried to fix a bug which I experienced, in r1773 I reverted the case-change to the template file names. Now, here is what the problem is:</p> <p>When you call the XSD generation helper, you simply call http://.../fluid</p> <ol style="list-style-type: none">1. Since no controller and action is given, "Default" and "index" are used2. The template is resolved as ".../Default/index.html", fine. <p>Now you fill in the form and press proceed.</p> <ol style="list-style-type: none">1. Controller and action are given, "default" and "generatexsd" are used2. The template is resolved as ".../default/generatexsd.html"3. The file lies in ".../Default/generateXSD.html" and cannot be found, leading to Exception 1225709595 <p>The FLOW3 MVC part circumvents the problem by using <code>getCaseSensitiveObjectName()</code> when looking for controller or view objects. Since the template is not registered with the object manager, this is of no help here, but a similar mechanism is needed.</p> <p>Note: The problem can only be reproduced on a case-sensitive filesystem.</p>			

History

#1 - 2009-03-17 14:06 - Sebastian Kurfuerst

Resolved. The rule is now as follows:

- All templates are in the folder Resources/Private/Templates/<ControllerName>/<actionname>.html, where
- ControllerName is exactly spelled like the class
- actionname is lowercased.

#2 - 2009-03-17 14:07 - Sebastian Kurfuerst

- Status changed from New to Resolved
