Sprint Focus:			
Subject:	Remove typo3/gfx		
Description These images are not used any longer. Also they are duplicated in sysext/t3skin/icons/gfx. Those which are missing there could be copied to this place. A rewrite rule in htaccess could be the backwards compatible way if anyone refers direct to the old resources. (issue imported from #M17569)

What would be the proper way for deprecating their use?

#6 - 2011-05-18 14:38 - Georg Ringer

htaccess to an ajax call to be able to log the call?

#7 - 2011-06-04 07:26 - Georg Ringer

again: IMO this is a no go to just remove things in core. Everything is deprecated and so must also be the icons.

i searched for typo3/gfx/ and IMO the admin panel uses it:

```
$outTable.= '<tr>' .  
    '<td style="white-space:nowrap;"><img ' .  
    t3lib_iconWorks::skinImg(TYPO3_mainDir, 'gfx/i/pages.gif', 'width="18" height="16"' . ' align="top" border="0" alt="" />' .  
$row[1] .  
    '</td><td></td><td>...</td></tr>';
```

and install tool

```
} else die('No typo3/gfx/typo3logo.gif file!');
```

and statictemplates uses it in a sql insert.

furthermore: did you do a check if all icons are available in t3skin? IMO there is a fallback from there to typo3/gfx/?

If the files are still in use, we can change that.

As with any other stuff IMHO we have a deprecation for those files also, don't we? So redirecting via an (optional) logger script might be a valid step before removing the files without proper compensation.

Anything new? How can the unused icons be identified?

gfx/selicons

are used for example when t3skin is inactive.

There are many more places where images are still used from this folder.

For example I wrote <https://review.typo3.org/#/c/40660/> that moves a few images
