[CLEANUP] Remove simulate static from Core

This patch removes the old simulate_static system extension.
Since tslib_fe still contains idPartsAnalyze(), which is a relict of
simulate static methods, this method also removed.

History

#1 - 2011-03-02 15:31 - Dmitry Dulepov

I could find that this function is used only inside the other deprecated function.

#2 - 2011-11-28 00:06 - Markus Klein

- *Target version deleted (0)*

As of 4.7 the above mentioned functions are not present in Core anymore.

Only `idPartsAnalyze()` is still used in Core and marked for deletion in 4.5.

An exact copy of `idPartsAnalyze()` is already available in `tx_simulatestatic`, but the call to `idPartsAnalyze()` is not so easy to replace.

I'd suggest to introduce a hook, adding the possibility for a general id modification by an extension.
