<b>Subject:</b>	Refactor Package\Meta to Package\MetaData		
<b>Description</b>	<p>The metadata for a package is organized in the "Meta" class, following the "MetaInterface". This means we also have "MetaReader" and various member variables named according to this schema.</p> <p>Now, a meta reader reads about reading and what a meta interface is is greek to me. :)</p> <p>Thus it seems to be a good thing to rename that "Meta" to "MetaData" and adjust the following uses of the name as well.</p>
