TYPO3.Flow - Bug # 2557

Status:	Resolved	**Priority:**	Must have
Author:	Robert Lemke	**Category:**	MVC
Created:	2009-02-04	**Assigned To:**	Karsten Dambekalns
Updated:	2010-10-20	**Due date:**	

PHP Version:	
Has patch:	
Complexity:	
Affected Flow version:	
Subject:	Links rendered by the Router ignore application context

Description

If the application context is != production, the URL usually includes the index_*.php segment:

http://myhost/index_dev.php/foo/bar/baz

The script filename is, however, removed in rendered links which leads to a context switch:

http://myhost/foo/bar/baz

Also the routing has hard-coded support only for index_dev.php, other contexts are not supported.

It would be nice to switch the context depending on an environment variable, this would be very useful for CLI calls. And Apache can set the environment variable as part of a rewrite rule, so that FLOW3 never sees the "URL-encoding" of the context. Hm, something like that.
