

## TYPO3.Flow - Bug # 25776

<b>Status:</b>	Resolved	<b>Priority:</b>	Should have
<b>Author:</b>	Robert Lemke	<b>Category:</b>	Persistence
<b>Created:</b>	2011-04-05	<b>Assigned To:</b>	Karsten Dambekalns
<b>Updated:</b>	2011-04-13	<b>Due date:</b>	
<b>PHP Version:</b>			
<b>Has patch:</b>			
<b>Complexity:</b>			
<b>Affected Flow version:</b>			
<b>Subject:</b>	Doctrine proxy class files can't be overwritten by other SAPI type		
<b>Description</b>			
<p>When you run FLOW3 with empty caches for example from the command line, Doctrine proxy classes will be created. However, these files can't be overwritten or trashed by FLOW3 when it's running in web mode because the files are created with read-only permissions for the group. The same happens vice versa (first hit with Web).</p> <p>The solution would be to create Doctrine proxy files with -rw-rw-r-- permissions.</p>

[TASK] Use temporary file and rename for proxy class creation

Instead of a simple file\_put\_contents() the proxy class code is written to a temporary file and renamed to the final filename. This allows file access even if only allowed by the directory permission.

Fixes: #25776

For reference, this is what we use, the trick is the umask in combination with our recommended permissions (sticky group bit):

```
if (!is_dir($path) && strlen($path) > 0) {
    $oldMask = umask(000);
    mkdir($path, 0777, TRUE);
    umask($oldMask);
    if (!is_dir($path)) throw new \F3\FLOW3\Utility\Exception('Could not create directory "' . $path . '"', 1170251400);
}
```

No, it's a more general problem. All files, also the cache files FLOW3 creates, are not writeable by the group, thus the problem exists for those as well.

Turns out that this is true, but still the cache files can be replaced, because we use rename to move a temporary file in place of the old file. The DOctrine ProxyFactory does not do this.
