

TYPO3.Flow - Bug # 2601

Status:	Resolved	Priority:	Must have
Author:	Robert Lemke	Category:	MVC
Created:	2009-02-09	Assigned To:	Robert Lemke
Updated:	2010-10-20	Due date:	
PHP Version:			
Has patch:			
Complexity:			
Affected Flow version:			
Subject:	canProcessRequest doesn't accept mocked requests		
Description			
Currently the canProcessRequest() method only checks if the class name of the request 100% matches the class names specified in \$this->supportedRequestTypes. Therefore sub classes of these (like mock web requests) are not accepted.

Known issue in this commit: the TYPO3 backend and TYPO3CR backend don't work at the moment because the REST controller is not fully functional.

- FLOW3: (MVC) The canProcessRequest() method in the AbstractController now also accepts sub classes of the supported request types. Fixes #2601
- FLOW3: (MVC) Refactored parts of the ActionController. Also changed the order in which certain methods are called. The order is now: resolveActionMethodName(), initializeArguments(), mapRequestArgumentsToLocalArguments(), initializeView(), initializeAction(), callActionMethod(). Also resolves #2580.
- FLOW3: (MVC) Fixed parts of the RESTController. Note: the show, delete and update actions currently don't work due to a new way of handling ids. I'm working on it ...
- FLOW3: (MVC) Wrote proper tests for the REST controller. There are still missing tests for resolveActionMethodName() method.
